Oil Absorbents 吸油系列

Oil absorbents are made from melt-blown polypropylene. They are hydrophobic, also known as oil-only absorbents, which repel water, making them most suitable for cleaning up oil spills.

吸油系列只吸油，不吸水，广泛用于油库、油井、机械车间、轮船以及海洋湖泊的油污溢漏处理。

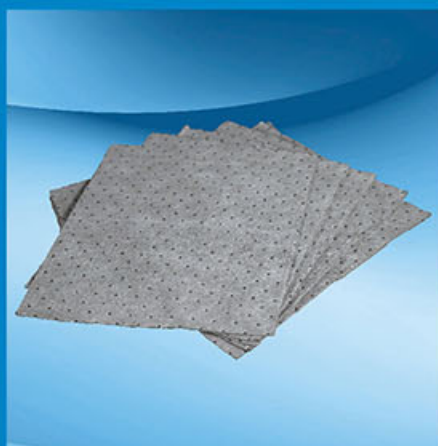

Hazchem Absorbents 化学吸附系列

Hazchem absorbents can absorb various chemical liquids, including acids and fuels. They are suitable for using in laboratories, hospitals, and chemical plants.

化学吸附系列用于吸附各类化学液体和腐蚀性液体，该系列用于化工车间和实验室，有效地控制和清理化学品溢漏，减少化学溢漏带来的危害。

Universal Absorbents 通用吸附系列

Universal absorbents can absorb a wide range of liquids including oil and common chemicals.

通用系列为亲油又亲水多功能产品，用于地面、化工厂、制造业、运输业等混合液体泄漏环境。

Pads and rolls have diverse applications in spill management. Pads are specifically designed to clean and absorb spilled oil and liquids, functioning like wipes and offering versatility for accessing hard-to-reach areas. In the event of a spill, socks or booms are utilized to contain the liquid, after which pads can be used to absorb the liquid that has been contained.

吸附棉和吸附卷用途广泛，吸附棉片用于清理及回收溢出油污和液体，灵活擦拭到狭小隐蔽的地方；当发生泄漏时，吸附棉条和吸附索可以围堵溢漏扩散，然后使用吸附棉集中清理溢漏。

Booms are floating barriers designed to contain and minimize the spread of oil on water. They are encased in a strong outer netting for durability, and have hooks and rings attached for linking them together to achieve the required length. Hooks are positioned 30cm from each end of the boom to create an overlap, which provides an additional barrier against oil escaping.
